

BASIC 2018 Perception

BASIC Academic Gains for Two Programs of 55 Students :
South: six months in reading; five months in math
East: four months in reading; two months in math

Parents' Perspective

"Thank you to the BASIC program for providing help to our children, principally thank you to David Osinski and his wife, Nancy, and to the entire staff for their collaboration in this activity, thank you for the patience with our mischievous children. It was an honor to have my children participate with you in this first year, as they have been very happy. We hope to continue next year. Thank you and may God bless you."

"This is the first time that my son has participated, and he has liked it a lot, as he prepares early to arrive on time. It has helped him to relate to other children, and to follow the rules. At last he is practicing sports. Thank you."

Reading

80% of all students began program below respective grade level in reading
77% of students who were below grade level improved
34% of all students reached respective grade level

Math

61% of all students began program below respective grade level
86% of students who were below grade level improved
56% overall reached their grade level

First Year BASIC Student Perspective

"I like being here because I get to learn new stuff in reading and math and soccer. I used to not like soccer and baseball but until I played soccer and baseball I liked it a lot. I like soccer a lot. It's very easy making friends here. I made 3 friends. The teachers here are very nice, they teach me new things that I didn't know like the Chinese Method. I never knew that."

Teacher Perspective

"As in previous years, I believe the program's objective of providing a well-balanced program of academic and athletic activities were met. It was different this year because there were two camps provided. As a result, friends were split between the two camps, which I found interesting. Although friends attended different camps, the students adapted well and were able to meet new friends and expand their social circle. It was great seeing the friendships develop and how the students bonded. The uniqueness of teaching and practicing life values such as confidence and teamwork, enhances this program even more."
